

POS.AI

ANALYTICS OF POINT OF SALE BY ARTIFICIAL INTELLIGENCE

What is POS.AI?

POS.AI is an application that recognize and track people at your POS (Point of Sale) via AI - Artificial Intelligence.

At the current stage, the application can easily identify, locate and count people. Recognition of age, gender and mood (demographics) is also possible.

This data can be used to create precise evaluations (KPIs) and find solutions to improve your Events & Business efficiency.

Position tracking

Get motion analysis of your visitors or count how much potential customers you missed. Track special by you defined areas like “counters”, “catering”, “product show area” and others to know how much people was there at which time.

Answers to questions like...

How many potential customers missed?

Where was the hotspots?

How long visitors stayed at our booth, POS or special defined area?

At which time we had peaks?

How many people was at my sales representation (counter) and need we to improve number of sales managers?

How many people interact at which time with my products, which product is more interesting?

POSITION	
TIME	PERSON-ID
09:00	18

POS.AI

Demography & Mood

POS.AI is a powerful app. It can do more than just track a precise position of a person. It's also able to track how much people interact with/watch your screens and how long. With face recognition POS. AI is able to detect age, gender and mood of your visitors or potential customers. With this information you can optimize your booth and marketing strategy which helps you to increase your lead generation / business success.

Answers to questions like...

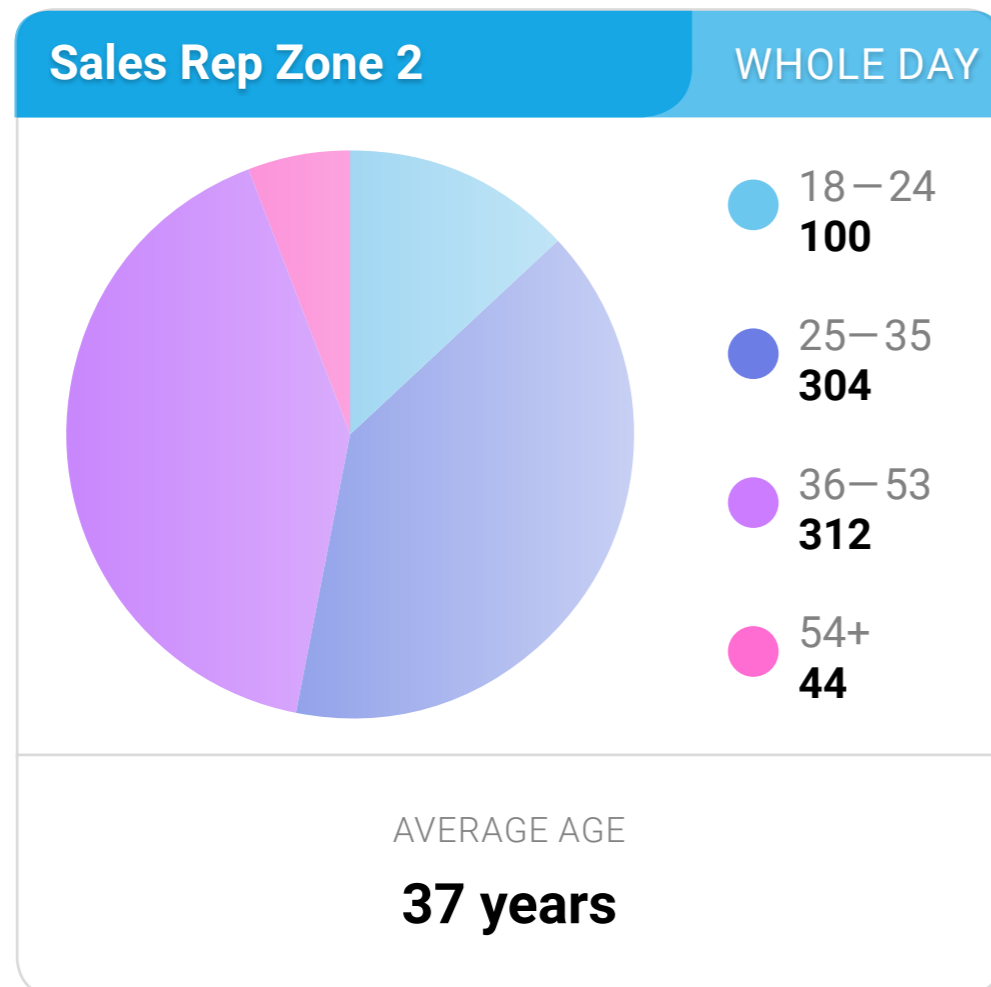

- ♂♀ What's the age, gender and mood of my visitors?
- 👁️ Who (Age, Gender), how long and how much people watched the content on my screens or explore my products?
- 😊 What's the mood at which time, and what's the average mood of my visitors?
- 👤 Given a significant difference between age and gender? Who watched which content / interested in which product?
- ☑️ A/B Test of different content on my screens. Which Video/Product was much more interesting and who is the target (Age, Gender)?

DEMOGRAPHY	
AGE	GENDER
28	Female

MOOD	
HAPPY	SUPRISED
72%	55%
NEUTRAL	ANGRY
46%	5%

Visitors age

Visitors age

Get the average age of your visitors for the whole booth / POS or focus on special points of interest for detailed analytics.
